

Chemical recycling & mass balance - The key to food grade?

Information

Description: With the PPWR quotas for 2030, the use of recycled materials will also become mandatory for food contact materials, but mechanical recycling often encounters regulatory limitations in this area. In this Inno-Talk, we shed light on the current EU status regarding the recognition of the mass balance method ("fuel use exempt") and analyze whether chemical recycling capacities in Europe are scaling up in time to effectively close the gap for legally compliant food-grade packaging.

Target group: This is aimed at sustainability managers, packaging strategists, developers, and purchasers at brand manufacturers and film producers who urgently need legally compliant solutions for the required use of recycled materials in food packaging.

Level: **Level 3** - Previous knowledge is useful

Further information: duration: 1:15h

Event code: **INE-06-26**

Times: Friday, 19. June 2026, **13:30 - 14:45** o'clock

Event price: *Free participation*

included in the price: Participation certificate and event documents are included. For events on site, food and drinks are also included during the event. All prices plus VAT, travel and accommodation costs.
