Inno-Meeting Europe
Information

Description:

There is a lot of discussion today about avoiding packaging - often very emotionally and sometimes ideologically. The first European Inno-Meeting will show the benefits and side effects of packaging on the climate.
• Where are the greatest potentials for improvement?
• Does packaging have any direct influence on the climate at all?
• Is the carbon footprint the only parameter for evaluating the climate impact of packaged food and goods?
• What role does the circular economy actually play along the supply chain?
• Is there enough differentiation between climate and environment in today's debate?
• Are paper and biopolymers the coming solutions as packaging material?
Well-known experts and impartial newcomers share their insights to discuss the latest trends, solutions and fundamental issues with you in a network of European retail packaging experts, brand owners and suppliers.Along the supply chain, everyone involved with FMCG will find valuable input, even outside of the box. As with all Inno-Meetings, the focus is on flexible packaging.
