

Barrier coatings and adhesives Information

Description: Barrier against gases is one of the main requirements for food packaging. Today, mono-materials and fibre-based materials like paper are increasingly required. These should support the circular economy and simplify recycling. But how do you create ideal barriers - we will talk about it.

Target group: Decision makers along the label and flexpack supply chain and anyone who wants to learn more about flexpack regarding technology and strategy.

Level: Level 3 - Previous knowledge is useful
