

10th Expert Meeting Packaging Printing - Efficient and Recyclable Information

Description:

For almost two decades, the "Expert Meeting Packaging Printing" has been the leading German-language forum for innovative printing, ink, and material solutions in the world of flexographic printing. In 2025, everything will revolve around recyclability: monomaterials, deinkable inks, short-run workflows, and digital data chains will fundamentally change packaging printing. Two days of keynotes, best practice cases, and controversial panel discussions, delivered as a live podcast, will provide you with facts, strategies, and inspiration for your business strategy. If you are also wondering how to print more sustainably, how MDO can be processed effectively, and how CO2 emissions can be reduced, then come and meet many like-minded people from across the packaging industry.

The event brings together not only printers, printing service providers, machine manufacturers, ink and film suppliers, packagers, and brands, but also everyone involved in printing along the supply chain for packaged goods in the broadest sense. This increasingly includes recyclers and recycle users, which, according to PPWR, will soon include all of us. But how? We will discuss and clarify. This year, there will again be a livestream, now with simultaneous translation between German and English. This means that there are no longer any barriers for interested parties from all over Europe!

Why participate?

Understand the pressure to act: classify laws and market trends at an early stage
 Learn about best practices: recipes for success and stumbling blocks straight from practice
 Expand your network: 150+ experts, workshops, evening event
 Experience innovations live: technology demonstrations + factory tour
 Hybrid convenience: on site or via livestream – full interaction guaranteed
 Shuttle bus between hotels and unique event location.
 Great supporting program
