Blown film extrusion compact, part 1 - Process and material determine the film properties

Informationen

Beschreibung:	The blown film extrusion process probably plays the most important role in the production of packaging films. It is often the process of choice for polyethylene in particular. Film properties can be significantly influenced in this process. In this web seminar, you will learn how PE-LD, PE-LLD and PE-HD, as well as metallocene PE's - and the subgroup of plastomers - behave in the blown film process and what properties they develop. The range of properties of the materials and the influence of the process on the films will also be discussed. This web seminar is particularly suitable for business people, career changers and purchasers who want to discuss at eye level.
Zielgruppe:	Employees from production, development, technology, design, QA, technical purchasing and sales
Niveau:	**Stufe 2** - Vorkenntnisse sind hilfreich, aber nicht Voraussetzung
Weitere Informationen:	Dauer: 2:00h Ein Video Ein Download
Veranstaltungscode:	**EXbE-05-24**
