INNOFORM®

Defect patterns in blown film extrusion

Weitere Informationen:	Dauer: 2:00h Ein Video Ein Download
Niveau:	Stufe 2 - Vorkenntnisse sind hilfreich, aber nicht Voraussetzung
Zielgruppe:	Employees from production, development, technology, design, QA, technical purchasing and sales
	This web seminar is particularly suitable for career changers and purchasers who want to discuss issues at eye level. Internal training for machine operators can also build on this web seminar.
	In this web seminar, you will learn the important basics of rheology and the properties of the raw materials and additives used in blown films. In addition, typical defect patterns are presented and their causes and corrective measures are discussed.
Beschreibung:	The blown film extrusion process probably plays the most important role in the production of packaging films. It is often the process of choice for polyethylene in particular.
