

Monomaterial FFS-Packaging - What is new?

Information

Description:	Sealing and processing mono-material packaging is no trivial matter. We talk about optimised mono-material films for FFS processes. We explain why a temperature gradient between the outer and inner layer is necessary, how MDO technology has made progress possible here and what mechanical engineering can do to support mono-material welding.
Target group:	Everyone who is involved in the packaging of flexible packaging is cordially invited
Level:	Level 3 - Previous knowledge is useful
Further information:	duration: 1:15h
Event code:	INE-09-25
Times:	Friday, 12. September 2025, 13:30 - 14:45 o'clock
Event price:	<i>Free participation</i>
included in the price:	Participation certificate and event documents are included. For events on site, food and drinks are also included during the event. All prices plus VAT, travel and accommodation costs.
